

NETWORK ARCHITECT

Summary:

Over twenty five years of IT service delivery experience. Includes development, implementation, and management of all aspects of Telecommunications and Network Operations and Architecture. Provides performance-based and change management solutions in the commercial and government sectors. Experienced with all aspects of network support and engineering, including working knowledge of network and enterprise management automated tools and systems. Significant expertise in network engineering and optimization.

Experience:

Managed operation of worldwide network for Cummins Engine, including network staff, communications software technician, and network engineers. Performed at or above service level requirements. Also held complete budgetary responsibility for telecommunications cost. Network consisted of greater than 350 Cisco routers and 700 circuits.

Developed network solutions, network design, and concept of operations for multiple large-scale, global outsourcing deals. Participated as lead network subject matter expert on proposal, due diligence, site survey, transition, and implementation teams through successful capture of deals.

Served as network operations manager for the Environmental Protection Agency (EPA) as part of a multi-year contract. Held complete responsibility for combined SNA/IP network with extensive backbone.

Responsible for the network management and telecommunications of multiple data center transitions and consolidations. Interface with telecommunications vendors for provisioning of facilities and gathering performance statistics for network optimization.

Held leadership, management, and strategic planning responsibilities in the network engineering, implementation, and operations areas with companies such as Lockheed Martin, ACS, and Bethlehem Steel.

Ensure compliance with Sarbanes Oxley and ITIL processes as related to network and telecommunications initiatives and operations.
